Art Unit: 3711

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 8, 9, and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Wolpert. Claims 1, 2, 4, 8, 9, 11, and 12 are clearly anticipated.

In response to applicant's arguments tube 3 is "single piece" and part of the tip section as required by the amended claims.

Regarding the arguments over claims 3 and 13 the end of the shank 15 provides an end member for weight 16 and therefore locates it and may be considered the locator.

Concerning claim 8 note weight 16.

Claim 5 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Barrett.

In response to applicant's arguments tube 27 is "single piece" and part of the tip section as required by the amended claims. Element 26 will provide weight and stiffening to the tip section.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson.

In response to applicant's arguments tube b is "single piece" and part of the tip section as required by the amended claims. Wilson's member e is considered the stiffening member. Wilson does not give the exact length of the member but it would appear to be between 1 and 10 inches and absent some showing of unexpected results the claimed range is not considered to have been unobvious to the ordinarily skilled artisan.

In further response to applicant's arguments the examiner did not state that element e "might" add stiffening. Such an element clearly will provide stiffening which is what the claim requires.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wolpert. Wolpert discloses that any smooth surface finish may be used and the examiner takes official notice that chrome-plated steel is a commonly known smooth surface finish. In response to the applicant's argument the examiner notes that applicant has not disputed that chrome-plated steel is a commonly known smooth surface finish and that Wolpert discloses the use of a smooth surface finish.

Applicant's arguments filed 12/13/02 have been fully considered but they are not persuasive.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3711

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
